

Photovoltaic panels are recommended not to be installed

Should I go solar with a ground-mounted solar panel installation?

Here's what to consider if you're thinking about going solar with a ground-mounted solar panel installation. The biggest advantage with ground-mounted solar panels is that they offer greater control over your solar panel direction and angle. Solar panels need to face either south or southwest to receive maximum direct sunlight.

Are solar panels right for You?

Solar panels are best for people who live in good solar states with solar-friendly policies, like net metering and solar incentive programs. Homes with south-facing roofs and lots of unshaded space are also ideal for solar. Homeowners with high electricity bills are among those who can benefit the most from going solar.

Where can solar panels be installed?

The roof of your home is the most common site for solar panels -- but it's not the only place they can go. Homeowners who can't get rooftop solar panels can get creative and find another site. Solar panels can be installed on a carport, gazebo, or pergola.

Can I install solar panels myself?

It is possible to install most of a solar panel system yourself -- mounting the panels on your roof and connecting them to each other. But if your home is connected to a grid, you'll need to hire a licensed electrician for the final connection needed to feed electricity to your utility.

Should solar panels be angled on a low angled roof?

Flush-mounting solar panels on a low-angled roof will produce less electricity and reduce solar savings. To receive exceptional solar savings, you'll want your solar panels to be angled in a way that optimizes the sunlight exposure for that location. This is done by tilting your solar panels at the same angle as the latitude of your home.

What should I avoid when installing solar panels?

Here are a few things you'll want to avoid when placing your panels: Too much shade: Solar panels are at their most efficient when hit with direct sunlight. If your yard has a lot of trees, you'll want to avoid placing panels in a spot that's usually covered in shade.
