

Photovoltaic panels can be installed on the ground by individuals

Where can a ground-mounted solar panel be installed?

Ground-mounted solar panels can be installed anywhere with good sun exposure and sufficient amounts of open space - a minimum of 350 square feet is usually required. Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems.

Are ground-mounted solar panels right for You?

Ground-mounted solar panels get installed by pole mount or standard mount. Ground-mount solar panels provide homeowners a way to add solar if their home doesn't have ideal conditions for rooftop solar panels. Find out why people choose ground-mounted solar panels and if they're right for you.

Should I choose a roof or a ground-mounted solar system?

If your roof works for solar and can fit enough solar panels to meet your energy needs, it's usually best to choose rooftop solar panels. If you need a really large system that won't fit on your roof and you have enough open land, opt for ground-mounted panels.

Can you install solar panels yourself?

Installing a ground-mounted solar panels system is simpler than installing a rooftop solar panels system. Hence, it is possible to install your solar panels yourself in your backyard with little expertise. However, this doesn't rule out the need to hire an expert for your ground-mounted solar installation.

Are ground-mounted solar panels better than rooftop solar panels?

Ground-mounted solar panels have some advantages over rooftop panels, but come up short elsewhere. Most standard ground-mounted solar arrays involve metal framing that is driven into or secured to the ground, typically with cement. There are any number of configurations that can be achieved using various racking and mounting systems.

What are the different types of residential ground-mounted solar panels?

You can choose from three main types of residential ground-mounted solar panel systems: Pole-mounted panels: Pole-mounted solar systems elevate panels above any ground obstructions, such as dense vegetation. This setup is more expensive than other types but is more compatible with dual-axis or single-axis solar tracking systems.
