

Photovoltaic panels installed on rooftop were killed by lightning

Can lightning damage a photovoltaic system?

Lightning is a common cause of failures in photovoltaic (PV) and wind-electric systems. A damaging surge can occur from lightning that strikes a long distance from the system or between clouds. But most lightning damage is preventable. Here are some of the most cost-effective techniques generally accepted by based on decades of experience.

Can Lightning affect a roof top PV system?

It has been shown that for buildings with roof top PV systems only the avoidance of lightning attachment to unprotected parts of the building is not sufficient. Lightning currents passing through the lightning protection system may still affect the PV power system through inductive coupling.

What happens if lightning strikes a solar panel?

When lightning strikes directly hit solar panels, they can cause significant physical damage, potentially resulting in the melting or shattering of system components such as panels, inverters, and cables. These high-voltage surges from lightning strikes can wreak havoc on the delicate balance of a solar panel system.

Can lightning damage PV panels?

The outcome indicated that the efficiency of the PV panel could be reduced as well as the panels may suffer physical deterioration caused by the high lightning impulse voltage/current. Many PV systems may not be properly protected against lightning.

How to protect PV panels during lightning strikes?

Therefore, an adequate lightning protection system (LPS) must be installed to protect the PV panels. In addition, the transient performance of PV panels during lightning strikes must be analyzed well. This paper presents a comprehensive review of the superior modeling methods of PV systems during lightning strikes.

How does Lightning affect a PV system?

After studying the influences of lightning strikes on the PV system and modeling methods, it is mandatory to design a protection system for the PV system during lightning. The lightning protection system (LPS) is used to protect the PV system from damage and service interruption.
