

Can *Belamcanda chinensis* be mixed in industrial production?

Therefore, due to the significant differences of *B. chinensis* and *I. dichotoma* in chemical composition and biological activities, the current studies strongly proved that these two medicinal plants could not be mixed in industrial production and clinical medication. *Belamcanda chinensis* (L.) DC.

How do photovoltaic panels affect farmland ecosystems?

In farmland ecosystems, photovoltaic panel installation increased plant aboveground biomass, soil available phosphorus and soil pH, while reducing CO₂ flux, plant species richness and vegetation cover in woodlands.

Is *Belamcanda* a hardy plant?

Forms with pure yellow flowers are sometimes listed as another species, *B. flabellate*, but there is only one recognized species in the (former) genus *Belamcanda*. Despite the fact that some reputable references suggest it is hardy only in zones 8-10, it survives and flowers reliably in zone 4.

What is *Belamcanda chinensis*?

Belamcanda chinensis (L.) DC. (BC), a perennial herbaceous plant whose rhizome is named as She-gan in a traditional Chinese medicine (TCM) belongs to the family of Iridaceae and is widely cultivated in China, Korea, Japan, India and eastern Russia as an economic medicinal plant.

Can tinted semi-transparent solar panels transform the concept of agrivoltaics?

Agrivoltaics describes concurrent agricultural production of crops and photovoltaic generation of electricity on the same cropland. By using tinted semi-transparent solar panels, this study introduces a novel element to transform the concept of agrivoltaics from just solar-sharing to selective utilization of different light wavelengths.

Do agrivoltaics with tinted semi-transparent solar panels help grow spinach?

Overall, the implementation of agrivoltaics with tinted semi-transparent solar panel combined with the growth of spinach was calculated to give a gross financial gain of about +35% compared with growth without the solar panel (Table 1 and Appendix S2, Supporting Information).

Flowers that resemble an exotic lily, leaves like an iris, seed clusters that look like a blackberry, and lots of different names - put them all together and what do you get? The former *Belamcanda chinensis*, of course! For a more extensive ...

Photovoltaic panels planted with Belamcanda chinensis
