

Leaks from valves, tanks, or collectors are another sign that your solar hot water system is in dire need of repairs. Most leaks result from faulty or loose valves. These are small components that control water input and output from the tank, ...

In order for the energy of the sun to reach the water tank, active solar hot water systems use a heat exchanger (also known as a heat transfer system) to accomplish the task. For most efficient home systems, the heat exchanger is a ...

Check storage tanks, etc., for cracks, leaks, rust, or other signs of corrosion. Steel storage tanks have a "sacrificial anode" which corrodes before the tank does and should be replaced at an interval recommended by the supplier. It is a good ...
