

Can pumped storage power stations be used in combined bidding?

Pumped storage power stations are controllable with the characteristic of energy storage. It can be employed in combined bidding with REPPs, improving the flexibility of market bidding. In , it was pointed out that the combined bidding of wind power and pumped storage had good applicability in insular power systems.

What is the optimal bidding strategy for a renewable-based virtual power plant?

Optimal bidding strategy of a renewable-based virtual power plant including wind and solar units and dispatchable loads [J] A risk-based gaming framework for VPP bidding strategy in a joint energy and regulation market [J] Iranian Journal of Science and Technology, Transactions of Electrical Engineering, 43 (2019), pp. 545 - 558 H. Wang, L.

How data based bidding strategies can be used in electricity markets?

With the development of data methods, the historical data of power systems and electricity markets can play significant roles in market bidding modeling, market analysis, and decision-making. The data-driven bidding strategies will be a feasible research direction.

What is stochastic programming based optimal bidding?

Stochastic programming-based optimal bidding of compressed air energy storage with wind and thermal generation units in energy and reserve markets [J] An efficient bidding strategy for selecting most economic horizon in restructured electricity market with hybrid generation and energy storage [J]

What data do we need to build a suitable bidding strategy?

Data on the electricity market and the power systems are needed for building a suitable bidding strategy. Commonly, the predicted output of the REPPs, the available capacity of flexible resources, the predicted load demands, and the predicted market prices are given in the existing literature.

Can hydrogen energy storage be used in a combined bidding strategy?

With the development of power-to-gas (P2G) technology, hydrogen energy storage, another form of energy storage, can also be applied in a combined bidding strategy. Market frameworks are also studied in some papers. Chen et al. (2022) proposed a semi-centralized market mechanism for energy storage in the day-ahead market.
