

# Photovoltaic support load factor table

What is the load factor of solar photovoltaics in the UK?

The load factor of electricity from solar photovoltaics in the United Kingdom has seen an overall increase since 2010, amounting to 10.6 percent in 2022. This was significantly lower when compared to the load factors of other renewable sources. This can be explained by the lack of consistency in the number of sunny days recorded.

Are wind load factors affecting solar PV?

Key findings are: Median load factors were up for solar PV from 10.3% to 10.4% as average sunlight hours increased. Median wind load factors remained unchanged at 19.1% but mean wind load factors went down from 29.7 per cent to 26.0 per cent.

What are load factors for feed in tariffs?

Load factors are a measure of the efficiency of electricity generation and this article updates the load factors for Feed in Tariffs, the bulk of which are Solar PV. Load factors for both solar and wind were down marginally on last year, largely as a result of prevailing weather conditions.

What is the load factor for offshore wind?

In comparison, the load factor for offshore wind reached over 40 percent that same year. In 2019, solar PV accounted for 28.3 percent of the total renewable capacity. However, its share of renewable electricity generation was just 10.7 percent. This was due to the relatively low load factor.

What does 'valid load factor' mean?

The column 'Valid load factor' in Table 1 indicates how many installations were included in the final annual analysis for each technology. Micro CHP data is included in the main results, but this data must be treated with caution as the number of valid data points remains very low. 222,112

Does cableizer offer a weekly load factor and a yearly load factor?

Cableizer offers the possibility to add a weekly load factor and a yearly load factor for each system. In August 2018, the IEC published a new international technical specification IEC TS 62738. This document sets out general guidelines and recommendations for the design and installation of utility scale ground-mounted PV power plants.
