

Photovoltaic support z-shaped steel purlin

What is solar panel support with Z profiles and purlins brackets?

Solar power systems use the sun's rays as a high-temperature energy sources to produce electricity in a thermodynamic cycle. Thereby we have to introduce some solar panel support with Z profiles and purlins brackets, which are hot galvanized steel material for use in long time with better surface and the best cost during the system construction.

How are Z-purlins stabilized?

The Z-purlins are stabilized by means of stiffeners secured to the purlins at bearing points and by means of tie straps extending between adjacent purlins. Z profiles is made of galvanized steel strips by the method of cold-bending formed. The surface treatment are galvanized.

What is a light-gauge cold-formed steel roof purlin?

Light-gauge cold-formed steel roof purlins replace heavier hot-rolled steel angle and channel sections. A purlin is a secondary structural member that spans between the primary/main steel frame to support the roof cladding. The purlin transfers load from the roof cladding to the primary steel rafters.

How can Z purlins improve your building design?

With Z Purlins, your building design can be optimised by either increasing the portal bay widths (reducing the primary structure) or reducing the purlin and girt section sizes or thickness. By reducing the overall purlin and girt component weight, this smart design can achieve weight savings of up to 15% on simply supported designs.

What are Z purlins & girts?

Z Purlins and Girts provide an efficient, lightweight support system for your next construction project. The innovative 'Z' design offers greater flexibility in design and installation, driven by significant material savings. At Donovan Group, we specialise in driving efficiencies in construction.

What is Z-purlin roof construction?

A roof construction having at least one roof slope is disclosed wherein at least four Z-purlins are laid across and secured to a number of rafters on the roof slope in a building and the roof deck is then secured on top of the Z-purlins. Designed and engineered to suit to both concrete foundation and ground screw foundation solar farm.

Main products: All kinds of wire mesh, nails, wire, c-shaped steel purlin, Z-shaped steel purlin for steel structure, all kinds of steel pipes and all kinds of non-standard cold-formed steel profile. Products sell well in more than 20 ...
