

# Power of household solar power generation equipment

How many homes can a solar power system power?

A consistently growing solar energy landscape, currently producing 81 gigawatts of clean, solar power. This is more than enough to power 15+ million American homes! Perhaps the premier advantage of the solar power system lies in its versatile adaptability, giving you instant access to renewable solar power.

What is a solar generator & how does it work?

Solar generators convert sunlight into energy to power your devices and appliances when you don't have electricity, making them a perfect item to bring with you on a camping trip, or as a home backup system for running small appliances during a power outage.

Can a solar generator be used as a whole home power backup?

Given their portability and ease of operation, solar generators offer a unique energy solution for those on the move who need some extra electricity. That being said, the limited power capacity, slow recharge time, and dependence on the sun limit the usability of solar generators as whole home power backup systems.

Can a solar generator power a house?

If you're looking to power your entire house on a backup generator system, solar may not be the way to go. You can easily recharge small electronics and operate certain appliances with a solar generator but don't expect to be able to keep your fridge, TV, and lighting systems all operational for very long.

Can you store solar energy with a solar generator?

Storing solar energy with a solar generator has limitations when it comes to energy capacity. If you're looking to power your entire house on a backup generator system, solar may not be the way to go.

What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

These tools are great for getting started, but make sure to work with a solar installer for a custom estimate of how much power your solar energy system is likely to generate. For its analyses, NREL uses an average system size of ...
