What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

Is a solar power plant a conventional power plant?

The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels. Or there is another way to produce electrical energy that is concentrated solar energy.

Where can a solar power plant be installed?

For a bulk generation, this plant can be installed in any land. So, there are no specific site selection criteria like thermal and hydropower plants. The solar plant can be installed on the house or flat. So, it reduces the transmission cost as it generates energy near the load center.

What is a solar panel?

PV panels or Photovoltaic panel is a most important component of a solar power plant. It is made up of small solar cells. This is a device that is used to convert solar photon energy into electrical energy. Generally, silicon is used as a semiconductor material in solar cells. The typical rating of silicon solar cells is 0.5 V and 6 Amp.

Where do universities research solar panels?

Many universities also research new solar panel technology. For example, Stanford University's Global Climate & Energy Project provides funding for research into new technologies for clean energy and renewable resources, including solar power.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.
