

Price list of photovoltaic panel dismantling machines

How to remove a solar panel from a photovoltaic panel?

(1) The frame of the solar panel is removed by the frame removal machine. (2) Remove glass on the photovoltaic panel by a glass remover machine. This is the photovoltaic panel after removing the glass: (3) The solar photovoltaic panels with the aluminium frame and glass removed enter the twin shaft shredder.

What is photovoltaic panel processing equipment?

The photovoltaic panel processing equipment extracts silicon powder, copper powder and plastic with high market value through physical crushing and sorting.

What are the components of waste solar photovoltaic panels?

Waste solar photovoltaic panels The main components of photovoltaic modules are aluminum frame, glass, cell, EVA film, and backplane.

How to recycle photovoltaic modules?

There are generally three main steps for the recycling of photovoltaic modules: first, disassemble the modules by machine or manually, and remove the backplane, wires and aluminum frames; the second step is to remove the tempered glass; the third step is to disassemble the remaining components.

What materials can be recycled for photovoltaic panels?

Most of the waste photovoltaic panel components can be recycled, including 65%-75% glass, 5%-10% aluminum frame, 10% plastic (encapsulation machine and backplane), 3%-5% silicon, 1% copper And less than 0.1% of silver, tin, lead, etc., has a very high recovery value, the recovery rate can reach more than 95%.

Can photovoltaic panels be recycled?

The precious metal silver contained in it can also be reused; the PVDF polyvinylidene fluoride in the back sheet can also be made into Teflon, so as to maximize the recycling value. Recycling photovoltaic panels has low cost and zero pollution, and recycled materials can also be made into new photovoltaic panels.
