

Overview Basic concept Types of solar collector Non-concentrating photovoltaic (PV) trackers Concentrator photovoltaic (CPV) trackers Single-axis trackers Dual-axis trackers Construction and (Self-)Build A solar tracker is a device that orients a payload toward the Sun. Payloads are usually solar panels, parabolic troughs, Fresnel reflectors, lenses, or the mirrors of a heliostat. For flat-panel photovoltaic systems, trackers are used to minimize the angle of incidence between the incoming sunlight and a photovoltaic panel, sometimes k...

A photovoltaic solar tracker is a mechanical device to rotate PV panels to achieve an optimal angle concerning the sun's rays. The greater the perpendicular alignment with the sun's rays, the greater the efficiency. For this ...
