

# Prospects for energy storage space on the new energy side

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Is energy storage a new technology?

Energy storage is not a new technology. The earliest gravity-based pumped storage system was developed in Switzerland in 1907 and has since been widely applied globally. However, from an industry perspective, energy storage is still in its early stages of development.

What challenges does the energy storage industry face?

The energy storage industry faces challenges such as high costs, safety concerns, and lack of standardization. The prospects for the energy storage industry appear favorable, driven by a rising desire for renewable energy sources and the imperative for ensuring grid reliability and resilience.

Are high energy storage prices a signal for future investment?

Geske and Green (2020) stated that high prices are a signal for new production investments and the impacts of storage facilities on market prices may create a negative signal for future investments. On the other side, the expansion of energy storage investments results in a decrease in storage investment costs due to the learning effect.

How does energy storage affect investment in power generation?

Energy storage can affect investment in power generation by reducing the need for peaker plants and transmission and distribution upgrades, thereby lowering the overall cost of electricity generation and delivery.

What is the future of electric storage?

Similarly, they estimated that electric storage deployments will increase from 200 GWh in 2019 to about 5065 GWh in 2030. Applications range from power systems, industrial processes, cold chain, district heating and cooling, buildings thermal managements, etc.
