

Why is it important to assess photovoltaic power generation potential in China?

Clear spatial dislocations between PV power generation potential and population distribution and electricity demand. Accurate assessment of the photovoltaic (PV) power generation potential in China is important for the reduction of carbon emission intensity and the achievement of the goal of Carbon Neutral.

Do solar photovoltaic interventions reduce rural poverty in China?

Kai Wu acknowledges financial support from Program for Innovation Research in Central University of Finance and Economics. &#169; 2020, The Author (s). Dive into the research topics of 'Solar photovoltaic interventions have reduced rural poverty in China'. Together they form a unique fingerprint.

Can solar PV help China's poorest?

A review of photovoltaic poverty alleviation projects in China: current status, challenge and policy recommendations. Renew. Sustain. Energy Rev. 94, 214-223 (2018). Murray, S. F. Solar PV can help China's poorest.

What is a government subsidy for residential photovoltaics?

Policy variables. A government subsidy (Subsidy) for residential photovoltaics mainly refers to power generation subsidies, that is, a monetary reward for every kilowatt-hour of electricity generated by solar panels. The subsidy standards for each household are obtained from the National Development and Reform Commission (NDRC).

Will photovoltaic & energy storage become industrialized in China?

According to the reports, "Photovoltaic + Energy Storage" has become a global development trend and is one of the hottest development paths for the industry in the future. However, the energy storage industry in China has not yet formed industrialization.

Which land is suitable for PV power generation in China?

The results showed that the average suitability score of land in China is 0.1058 and the suitable land for PV power generation is about 993,000 km<sup>2</sup> in 2015. The PV power generation potential of China is 131.942 PWh, which is approximately 23 times the electricity demand of China in 2015.
