

Ranking of large wind power plants

What is the largest wind turbine in the world?

As of June 2022, the MySE 16.0-242 from MingYang Smart Energy was the largest wind turbine with a 242 rotor diameter and a nameplate capacity of 16 megawatts. As of that time it was still under construction and was expected to be online by 2026. The main function of wind turbines is to convert the wind's kinetic energy into electrical power.

Which country has the most wind power?

China is the world leader in wind energy, with over one-quarter of the world's wind power capacity. The country has the world's largest onshore windfarm in Gansu Province, built out of the Gobi Desert. The project's 10GW peak capacity sits a long way above its closest rival at time of writing, though announced projects will soon rival it.

Who is the largest wind energy company in the world?

Siemens is the largest wind energy company in the world. This is based on revenue. In 2022, Siemens had a revenue of \$78.03 billion, making it the largest wind energy company in the world. The second largest wind energy company in the world, in terms of revenue, is General Electric which had a 2022 revenue of \$76.555 billion.

Which countries produce the most wind energy in 2022?

In the context of regional growth, the Middle East, Latin America, South East Asia, and Africa saw their combined contributions to wind power generation increase from 8% to a promising 10% in 2022. China, the global leader in wind energy generation, produced a staggering 466.5 MWh in 2022, accounting for over 40% of the world's wind energy.

Which countries have the largest wind farms in the world?

Major wind farms in regions like Inner Mongolia and Xinjiang rank among the largest in the world. By 2030, China aims to triple its number of utility-scale wind and solar farms, backed by significant government investments across a broad range of renewable energy initiatives.

Which countries have the highest wind turbine capacity in 2023?

Here are the countries with the highest wind turbine capacity as of 2023: Capacity figures include both onshore and offshore wind are on an alternating current basis. China leads the world in wind energy, boasting a wind turbine capacity of 441,895 megawatts--nearly three times that of the U.S., which ranks second.

China continues to dominate wind power generation with 466.5 MWh, followed by the United States at 341.4 MWh, and Germany at 132.1 MWh. Denmark, while ranking 15th in total wind power generation, leads the world in terms of the ...
