

Reasons for using DC pumps with photovoltaic panels

Are solar water pumping systems based on photovoltaics?

The current state of system technologies, research, and the application of conventional and novel methods are presented in a review of solar water pumping systems. This publication aimed to compile studies on water pumping systems powered by solar energy with the help of photovoltaics.

Why is solar photovoltaic power a good choice for water pumping system?

Furthermore, the use of solar photovoltaic power to operate the water pumping system is the most appropriate choice because there is a natural relationship between requirement of water and the availability of solar power. SPVWPS comprises of different components, which can be grouped as mechanical, electrical and electronic components.

Can photovoltaic energy be used to drive water pump?

Policies and ethics This chapter deals with the use of photovoltaic energy for direct current motor to drive water pump. The resort to clean renewable energy, instead of fossil fuels, is step up day by day. The contribution is to set up a water pump system based on the solar energy.

What is direct driven solar PV water pumping system?

Direct driven solar PV water pumping system is shown in Fig. 4. In this system, electricity generated by PV modules is directly supplied to the pump. The pump uses this electric power to pump the water. As no backup power is available, the system pumps water during the daytime only when the solar energy is available.

Why is PV water pumping so popular?

PV water pumping has grown in popularity in recent years because of the lack of energy and the rise in diesel prices. Pumped water flow rates are determined by incident solar energy and PV array size. A well-designed solar system ensures conspicuous long-term efficiency gains with regard to traditional pumping systems.

Why are solar water pumps so popular?

Due to this water pumps are being used for decades. Several renewable energy sources can be used for water pumping, but solar gain high popularity as it is available most of the places even in a remote location, which decreases the dependency on-grid and diesel for the driving of the pump.
