

# Regional photovoltaic panel installation directions

Which direction should a photovoltaic module be installed?

When installing photovoltaic modules in the northern Hemisphere, the optimal installation direction of the module is to face south; When installing photovoltaic modules in the Southern Hemisphere, the optimal installation direction of the module is to face north. Serial connected PV modules should be installed in the same orientation and Angle.

How do I install a solar photovoltaic system?

Installing solar photovoltaic systems requires specialized skills and knowledge. Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements.

Who should install a solar photovoltaic system?

Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements. Keep this guide in a safe place for future reference and in case of sale or disposal of the Modules.

Which materials should be used to install photovoltaic modules?

JA Solar recommends that when installing modules at the seaside, stainless steel or aluminum materials should be used to contact the photovoltaic modules, and the installation parts should be well protected from corrosion. The tilt angle of the modules is measured between the surface of the modules and a horizontal ground surface.

Where should a solar module be installed?

It is recommended to install modules in environments where the operating temperature ranges from  $-40^{\circ}\text{C}$  to  $40^{\circ}\text{C}$ . The module is not suitable for space environment, and it is recommended that the altitude of the module be installed is not more than 2000 meters. The modules need to be installed in an area where there is no shadow all year round.

What is included in a solar installation manual?

This installation manual contains important electrical and mechanical installation information as well as safety information that you must be familiar with, providing important safety instructions for the installation, use and maintenance of solar modules.

Generally, a DIY solar panel installation can take anywhere from a few days to a few weeks. It really depends on how much time you dedicate to the project. But a good rule of thumb is to plan for about 2 hours of work per solar panel. So if ...
