

# Residential Solar Power Market

How big is the US residential solar PV market?

The U.S. residential solar PV market size was estimated at USD 7.45 billion in 2023 and is expected to grow at a compound annual growth rate (CAGR) of 14.4% from 2024 to 2030.

Which country has the most solar PV installed capacity in 2022?

Asia-Pacific accounted for more than 30% of the global residential solar PV market and is expected to continue its dominance during the forecast period. India's solar PV installed capacity increased significantly from 49.3 GW in 2021 to 62.8 GW in 2022. The power is further expected to increase in the coming years.

How will California residential solar PV market perform over the forecast period?

California residential solar PV market is anticipated to witness substantial growth over the forecast period on account of the presence of strong federal schemes that include rising demand across public and private sectors for green electricity, and solar investment tax credits.

How much solar capacity did the US solar market install in 2023?

In 2023, the US solar market installed 32.4 GWdc of capacity, a remarkable 51% increase from 2022. This was the industry's biggest year by far, exceeding 30 GWdc of capacity for the first time.

Why are residential solar PV installations increasing?

The falling price has resulted in a massive increase in the residential PV capacity globally. Many countries are increasing their residential rooftop targets. The Solar Energy Industry Association (SEIA) statistics show that, in 2022, residential solar PV installed capacity in the United States accounted for about 5.08 GW.

Why does California have a dominant solar PV market?

Presence of favorable policies and regulations in California, such as net metering for solar PV, has been a major reason for its dominant market position. Furthermore, availability of various incentives for residential end-users to install solar PV systems has boosted market growth.

The Malaysia Solar Energy Market is projected to register a CAGR of greater than 9% during the forecast period (2024-2029) ... Malaysia generates and consumes clean electricity from some of its large-scale solar power generation plants, ...
