

# Roewe New Energy Energy Storage Device

What storage systems does RWE use?

In its other projects, RWE makes use of storage systems from used electric car batteries ("second life" batteries) or liquid batteries known as RedOx flow systems. In addition, RWE offers industrial customers tailor-made, cutting-edge solutions, drawing on its expertise in energy trading and innovative storage systems.

Does RWE have a battery storage business?

RWE continues to expand its battery storage technology business. The company has finalised its investment decision for a 220 megawatt (MW) battery storage project in Germany. A total of 690 lithium-ion batteries blocks are to be installed at the sites of RWE's power plants in Neurath and Hamm in North Rhine-Westphalia.

How can RWE connect battery storage technology with green electricity production?

When it comes to linking battery storage technology with green electricity production, RWE can draw on many years of experience in the energy storage and renewables sector. The company provides project planning, modelling, system integration, and commissioning of the projects in house and under one roof. Beginning of dialog window.

Why should you choose RWE energy storage?

This enables optimal management in terms of which unit efficiently provides balancing energy, either individually or as a group, and when. RWE leverages its energy storage technical capabilities by providing detailed project design, modelling, system integration and commissioning.

What will RWE Power do for traditional power plant sites?

Lars Kulik, member of the Board of RWE Power: "Against the backdrop of structural change, this group-wide joint project will enable traditional power plant sites to contribute to the energy supply of the future once they have been fitted with state-of-the-art storage technology and innovative networking systems."

What does RWE do with used car batteries?

In Germany, RWE is currently commissioning a 117MW project that is virtually connected to the run-of-river hydropower plants on the Moselle River. In its other projects, RWE makes use of storage systems from used electric car batteries ("second life" batteries) or liquid batteries known as RedOx flow systems.
