

Can photovoltaic panels be installed on a building roof?

The installation of photovoltaic panels on a building roof or integral with a building roof also raises other code issues(e.g.,roof loading,wind loading,fire ratings,weather tightness,mounting systems,roof penetrations,etc.),which may also be relevant for systems mounted on or integral to a wall.

How much space does a photovoltaic module occupy?

Photovoltaic modules installed on a sloping roof or facade occupy an area of approximately 8 m<sup>2</sup>/kWp. Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp,avoiding shading between the rows of modules.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp,avoiding shading between the rows of modules. The design of a photovoltaic system,from the public operator's network to the photovoltaic modules,requires careful planning and compliance with local regulations.
