

# Salt water spray photovoltaic panels

Does water spray cooling affect photovoltaic panel performance?

An experimental study was conducted on a monocrystalline photovoltaic panel (PV). A water spray cooling technique was implemented to determine PV panel response. The experimental results showed favorable cooling effect on the panel performance. A feasibility aspect of the water spray cooling technique was also proven.

Can water spray cooling be used on a monocrystalline photovoltaic panel?

**Conclusions** In this paper, a water spray cooling technique was proposed and experimentally tested on a monocrystalline photovoltaic panel for different cooling circumstances (regimes). The best cooling option turned out to be simultaneous cooling of front and backside PV panel surfaces.

Can water spraying be used to clean PV panels?

Water spraying is one of the most commonly used methods for PV panel cleaning and the atmospheric water harvested by this cooling system could be used for cleaning PV panels in dry regions where obtaining water in the liquid form is a challenge.

Can a water spray cooling technique be used simultaneously on a PV panel?

The objective of this paper was to develop an experimental setup and to investigate a water spray cooling technique, implemented simultaneously on the front and back side of a PV panel as well as other different water spray cooling circumstances to ensure gained result comparison and to offer an optimal cooling solution (regime).

Do photovoltaic panels need a water cooling system?

The results of the photovoltaic panel with the pulsed-spray water cooling system are compared with the steady-spray water cooling system and the uncooled photovoltaic panel. A cost analysis is also conducted to determine the financial benefits of employing the new cooling systems for the photovoltaic panels.

Can water spray nozzles reduce the temperature of solar panel?

As already mentioned, a row of water spray nozzles with periodical and steady flows is used as the cooling system in this study to reduce the temperature of PV panel and increase the electric power output of this solar system.
