

Schematic diagram of flywheel energy storage system

What are the components of a flywheel energy storage system?

A flywheel energy storage system consists of bearings, a rotating mass, a motor-generator, and a frequency inverter. Fig. 14.4 shows the main components of a flywheel energy storage system. The design of the components influences the overall efficiency, and can help in reducing power transmission losses.

What is a flywheel energy storage system (fess)?

As a vital energy conversion equipment, the flywheel energy storage system (FESS) [,,,] could efficiently realize the mutual conversion between mechanical energy and electrical energy. It has the advantages of high conversion efficiency [6,7], low negative environmental impact [8,9], and high power density [10,11].

How does a flywheel work?

A flywheel is driven by a reversible electric machine that initially operates as a motor to supply energy to the inertial mass. With the drive system disconnected, the flywheel stores energy in its rotation. Upon request, this latter will be transformed into electrical energy by the generator.

How does a flywheel store energy?

The flywheel stores energy by spinning at high speeds and releases it when needed by converting kinetic energy into electrical energy. A power electronic converter is the link between the flywheel motor and the power supply system. The kinetic energy stored in the flywheel is presented in Eq. (1).

Can flywheel energy storage system array improve power system performance?

Moreover, flywheel energy storage system array (FESA) is a potential and promising alternative to other forms of ESS in power system applications for improving power system efficiency, stability and security. However, control systems of PV-FESS, WT-FESS and FESA are crucial to guarantee the FESS performance.

Can flywheel energy storage systems be used for power smoothing?

Mansour et al. conducted a comparative study analyzing the performance of DTC and FOC in managing Flywheel Energy Storage Systems (FESS) for power smoothing in wind power generation applications.
