How to detect a ground fault in a PV system?

PV Ground Fault Detection and Interrupt Method 1: Breaker in ground path (with multiple arrays and SCCs). With this design, there can only be one breaker in the ground path. If there were multiple breakers, the ground fault current through any one of them might not be enough to trip the breaker.

What is PV ground fault protection?

The PV Ground fault protection must: Provide an indication that a ground fault has occurred. Note: The PV GFP device can not also be the PV disconnect. Note 1: PV GFP devices are primarily for fire prevention, not shock prevention.

What causes a PV ground fault?

This can be caused by a short between one of the power lines from the array to a conductor or equipment chassis that is tied to equipment ground. PV Ground faults can be hard to detect but can dump a substantial amount of current through the equipment ground circuit, particularly for large arrays with multiple serial strings.

Why is proper grounding of a photovoltaic power system important?

Proper grounding of a photovoltaic (PV) power system is critical to ensuring the safety of the public during the installation's decades-long life. Although all components of a PV system may not be fully functional for this period of time, the basic PV module can produce potentially dangerous currents and voltages for the life of the system.

Do PV systems need to be grounded?

The NEC requires that all exposed or accessible PV equipment and circuits be properly connected to earth(grounded) using specified methods and equipment. Source circuits in PV systems may be grounded or ungrounded as explained in this paper. As installed PV systems age, grounding issues emerge that impact system safety.

How does a gfpd ground a PV system?

Grounding Electro Conductor--Installation. On utility-interactive PV systems, the connection between the DC grounded circuit conductor and the grounding system is usually made through the ground-fault protection device(GFPD) internal to most non-battery based utility-interactive inverters.
