

Shading area of rural solar power generation

Are roof-mounted solar PV systems a viable energy source for rural microgrids?

In rural areas, roof-mounted solar PV systems are among the main energy system development targets, and the spatial distribution information of PV power generation is crucial for the construction of rural microgrids.

How accurate is the spatial distribution of rooftop PV power generation potential?

By combining the above results and setting the solar radiation parameters and PV system efficiency, we can obtain the spatial distribution of the rooftop PV power generation potential in rural areas. This method is applied in northern China on a village and a town scale, and the overall accuracy of the revised U-Net model can reach over 92%.

How accurate is the spatial distribution of PV power generation potential?

Existing methods for estimating the spatial distribution of PV power generation potential either have low accuracy and rely on manual experience or are too costly to be applied in rural areas.

Can large-scale photovoltaics be used in rural China?

This paper presents a system for estimating the potential of large-scale photovoltaics in rural China. Based on high-definition map images, the technical potential was obtained through the "photovoltaic Power Station Design Code" (GB50797-2012). The improved SegNeXt model was used for roof identification with high accuracy.

What is the shading area of PV panels?

For the PI method, the PV panel angle is 0° ; therefore, there is no shading area of adjacent PV panels, and only the maintenance space should be considered. Fig. 8. The global solar radiation received by the south-facing photovoltaic (PV) panels with different angles from PVsyst database.

Can rooftop solar energy be used in rural areas?

There are nearly no studies on rooftop solar energy potential in rural areas. Although PV is very prosperous in rural areas, it can meet the energy demands of local farmers and supply extra electricity to urban areas. This can promote clean energy in rural areas and improve the living conditions of farmers.
