

A shed roof, also known as a mono-pitch roof or skillion roof, uses a single sloped, flat surface angled in one direction. This type of roof resembles half of a gable roof, and while these are typically used for porches and other additions ...

While many low-slope C& I roof-mounted solar projects rely on ballast to resist wind uplift, some projects or jurisdictions require mechanical attachments. In a ballasted application, for example, making mechanical connections to the roof ...
