

Solar Photovoltaic Panel Inspection Form

What is a solar panel inspection?

The solar inspection process is one of the most time-consuming parts of any company's operations, from design to installation. PV Education 101: A Guide for Solar Installation Professionals shows how to frame solar panel inspection when speaking to your customers about development costs and installation timelines.

What is included in a solar inspection?

There's some published examples of what is included in a solar inspection such as SolarAPP+ and California's solar permitting guidebook. During an onsite solar inspection, systems are evaluated for installation quality, equipment compatibility and compliance to building codes, and ensuring the system was installed as it was permitted.

Do you need a solar inspection?

Whether you are an installer, PV designer, or a renewable energy advocate of any kind, then you are probably well aware of the vigorous solar inspection process for distributed energy resources. Once the installation is complete, you can't just flip a switch and start generating power.

What happens during an onsite solar inspection?

During an onsite solar inspection, systems are evaluated for installation quality, equipment compatibility and compliance to building codes, and ensuring the system was installed as it was permitted. In some parts of the country, a licensed electrician is required to be present during an electrical inspection.

How do I prepare for a solar inspection?

The inspection process is a long, but important part of helping your customers go solar. At both the application and construction review stages of your projects, the best way to prepare for any solar inspection is with the knowledge and tools to efficiently design and install systems up to local safety standards.

Do you need a permit to install solar panels?

Generally, local governments require a homeowner's solar installer/contractor to obtain a permit for rooftop panels before they can be installed. After the PV system is installed, a professional from the local government will inspect the new array to ensure all building, electrical, and safety codes have been followed.

Our third-party inspections for photovoltaic systems include: First Article Inspections (FAI): Prior to mass production the solar panel properties are measured and compared with specifications to verify quality matches. In ...
