

Which countries are involved in energy cooperation and photovoltaic energy development?

As the core backbone of the RCEP, China, Japan, and South Korea account for well over 82% of the total economic volume within the RCEP. Therefore, the study of energy cooperation and photovoltaic energy development in China, Japan, and Korea is of great significance.

Where is the photovoltaic (PV) market developing?

Figure 7. The photovoltaic (PV) market development in China, Germany, Japan and the USA from 1990 to 2017 (Data source: IEA. PVPS. National Survey Report of PV Power Applications). By the end of 2009, the cumulative PV installed capacity in China was only 300 MW.

Is solar PV a competitive energy source in Korea?

By analyzing the competitiveness of renewable energy products in Korea, Nematollahi and Kim (2017) found that among renewable energy sources, solar PV is more attractive and pointed out that the government plays an important role in enhancing the competitiveness of PV products.

Which countries are promoting solar energy development?

Therefore, the study of energy cooperation and photovoltaic energy development in China, Japan, and Korea is of great significance. China, Japan, and South Korea have continued to promote the development of solar power in recent years.

Is solar PV a competitive source of new power generation capacity?

Solar PV is emerging as one of the most competitive sources of new power generation capacity after a decade of dramatic cost declines. A decline of 74% in total installed costs was observed between 2010 and 2018 (Figure 10).

Should Korea adopt a dual-track approach to promoting photovoltaic technology?

Ehie and Olibe (2010), by studying the research and development strategy of photovoltaic (PV) in Korea, pointed out that the Korean government should follow a dual-track approach of fostering commercialized technologies to cope with the current rapid growth and volatility of the market in order to enhance the competitiveness of the PV industry.
