

What is the global solar PV market like in 2022?

The solar PV market is dominated by crystalline silicon technology, for which the production process consists of four main steps: In 2022, global solar PV manufacturing capacity increased by over 70% to reach 450 GW for polysilicon and up to 640 GW for modules, with China accounting for more than 95% of new facilities throughout the supply chain.

How big is the solar photovoltaic (PV) market?

The market is expected to grow from USD 399.44 billion in 2024 to USD 2,517.99 billion by 2032 at a CAGR of 25.88% over the forecast period (2024-2032). Asia Pacific dominated the solar photovoltaic (PV) market with a market share of 49.16% in 2023. Solar energy is used to convert sunlight into electricity by using photovoltaic effect technology.

What is the global solar photovoltaic (PV) market share?

Geographically, the global solar photovoltaic (PV) market share is divided into North America, Europe, Asia Pacific, the Middle East & Africa, and Latin America. The Asia Pacific region held the major share of the global market. More than 77 GW of solar capacity will be added in the region in 2020.

What is the global solar power market size?

The global solar power market size was valued at USD 253.69 billion in 2023 and is projected to be worth USD 273 billion in 2024 and reach USD 436.36 billion by 2032, exhibiting a CAGR of 6% during the forecast period. North America dominated the solar power industry with a market share of 41.30% in 2023.

What is global photovoltaic power potential by country?

The World Bank has published the study Global Photovoltaic Power Potential by Country, which provides an aggregated and harmonized view on solar resource and the potential for development of utility-scale photovoltaic (PV) power plants from the perspective of countries and regions.

What is the theoretical potential for PV power generation?

Theoretical potential for PV power generation is best characterized by the long-term distribution of solar resource, in other words, the 'amount of fuel' available for PV electricity generation at a given location.

Comparison and ranking of countries and regions according to their PV power potential; Simplified Levelized Cost of Electricity (LCOE) relevant to current PV projects; Cross-correlation with the socio-economic indicators, relevant to PV ...
