

How can government subsidies help the PV industry?

In addition, government subsidies can reduce research and development costs of PV companies. Moreover, it is beneficial to achieve the collaborative innovation of PV industry chain between PV manufacturers and solar cell suppliers. Third, most control variables pass the significance test.

Should PV power price subsidies be reduced gradually?

When PV power price subsidies were reduced gradually, PV enterprises have to enhance the marginal returns in the market through technological progress, which may encourage PV enterprises to pay more efforts into R&D activities and obtain a competitive advantage in the market.

Do government subsidies improve the innovation efficiency of China's PV industry?

Some scholars have used data envelopment analysis and the Tobit model to analyze the relationship between the development of China's PV industry and government subsidies, and the study shows that government subsidies play an important role in improving the innovation efficiency of China's PV industry (Lin and Luan, 2020).

Do subsidies affect solar PV installation volumes in China?

Few studies applied regional data in a single country to analyze the influence of support policies on solar PV industry. Moreover, no research studies performed the spatial effect of subsidies on solar PV installation volumes in China. Therefore, we select panel data of 31 provincial units in China from 2011 to 2018.

What is the gap of subsidy in the PV industry?

Statistics reveal that the gap of subsidy in the PV industry reached 60 billion yuan in 2018. If no measures are taken, the subsidies for PV industry may reach 250 billion yuan by 2020. The renewable subsidies in a number of countries show the reduction trends with the increasing years, examples include Germany and the U.S..

Do government subsidies affect photovoltaic industry?

We apply spatial econometric model to analyze the performance of government subsidies on photovoltaic industry. The installed capacity of photovoltaics has shown a significant spatial agglomeration situation since 2012. The feed-in tariff and R&D subsidy policies play a positive incentive to the photovoltaic installed capacity.
