

Solar power accounts for the majority of Germany's electricity

What is the highest monthly solar power generation in Germany?

Nine TWh, the highest monthly solar power generation ever achieved in Germany, was produced in June 2023. The maximum solar output of 40.1 GW was reached on July 7 at 13:15, which corresponded to 68% of electricity generation.

How much solar power did Germany produce in 2023?

Photovoltaic systems generated around 59.9 TWh electricity in 2023, of which 53.5 TWh was fed into the public grid and 6.4 TWh was used for self-consumption. Nine TWh, the highest monthly solar power generation ever achieved in Germany, was produced in June 2023.

How many GW of solar power did Germany produce in June?

On May 4, they set a record: for the first time, solar plants in Germany fed more than 40 GW of power into the grid. With about 15 TWh of solar and wind power generation, June set a new monthly record for a June month. Hydropower produced 9.3 TWh in the first half of the year, up from 8.2 TWh a year earlier.

Do solar panels contribute to Germany's Power Mix?

Solar arrays can contribute a much greater share to the German power mix during particularly sunny times. On 7 July 2023, solar power reached its highest output ever in Germany so far, providing 68 percent of the entire electricity mix at about noon, when both sun intensity and usually also power consumption are at peak levels.

How much solar power does Germany have?

At the end of 2023, the country boasted a capacity of about 61 gigawatts (GW), according to figures by solar PV industry group BSW Solar. In contrast to conventional energy systems focused on big and centralised producers, tens of thousands of small solar panel operators have become an important part of the German energy system.

Will Germany use more solar energy in 2022?

Solar photovoltaics are on the list of renewable energy sources Germany would like to transition to using more. In fact, in the European Union, Germany already produced the most electricity from solar PV plants in 2022, at around 60.8 terawatt hours. This was more than double the amount produced by Spain in second place and Italy in third place.

Given its low cost and rapid deployability at a range of scales from single panels upwards, solar is also logically the cornerstone of programmes to increase electrification and energy access in countries where people lack it ...

Solar power accounts for the majority of Germany s electricity
