Can sheep grazing be used as solar energy?

Despite its multiple benefits, sheep grazing among solar fields has not been universally embraced and is seen by some as enabling the conversion of prime farmland to energy production. Some think solar belongs only or primarily on rooftops, parking lots, abandoned mine land and industrial or commercial sites.

Do Sheep fit under solar panels?

Sheep, on the other hand, fit nicely under the panels, typically built 2-3 feet off the ground, and they keep their heads down for the business at hand. The panels provide shelter and shade. Studies are also finding that vegetation planted for grazing under solar panels helps keep the panels cool, boosting energy production.

Are sheep better than goats on solar farms?

There are a few reasons sheep are the superior choice for grazing on solar farms. For one, they are shorter than cows and horses. They will also eat most kinds of forage, which helps keep plant growth at bay. Goats, on the other hand, will chew pretty much anything, which is a bit of a risk on solar farms.

What is a new dawn for sheep?

The project is called "A New Dawn for Shepherds: Grazing Sheep Under Utility-Scale Solar Arrays." Schmit is partnering with various farmers, solar industry professionals, and the ASGA, which is a nonprofit organization that connects sheep farmers with solar producers.

Can grazing under solar panels boost energy production?

Studies are also finding that vegetation planted for grazing under solar panels helps keep the panels cool, boosting energy production. Sheep feed from a mix of plants growing at the Nittany 1 solar array in central Pennsylvania. The plants were selected to support the sheep's nutritional needs and attract pollinating insects.
