

# Solar power generation is expensive

Why did solar power costs fall in 2021?

The global weighted average cost of newly commissioned solar photovoltaic (PV), onshore and offshore wind power projects fell in 2021. This was despite rising materials and equipment costs, given that there is a significant lag in the pass through to total installed costs.

How much does solar power cost per kilowatt-hour?

At \$0.03 per kilowatt-hour, electricity from utility-scale photovoltaic solar would be among the least expensive options for new power generation and it would be below the cost of most fossil fuel-powered generators, contributing to greater energy affordability. Learn more about how LCOE is calculated.

Are solar PV projects reducing the cost of electricity in 2022?

Between 2022 and 2023, utility-scale solar PV projects showed the most significant decrease (by 12%). For newly commissioned onshore wind projects, the global weighted average LCOE fell by 3% year-on-year; whilst for offshore wind, the cost of electricity of new projects decreased by 7% compared to 2022.

What is the least cost option for solar power?

Nevertheless, in terms of the LCOE of the median plant, onshore wind and utility scale solar PV are, assuming emission costs of USD 30/tCO<sub>2</sub>, the least cost options. Natural gas CCGTs are followed by offshore wind, nuclear new build and, finally, coal.

Why are solar power plants so expensive?

The price of steel, the main construction material for both utility-scale PV and onshore wind plants, increased 75% in China, 160% in the United States and 270% in Europe, while copper and aluminium became 60-80% more expensive. The highest growth was in freight rates, which rose almost sixfold.

Are 'projected costs of generating electricity' falling?

The key insight of the 2020 edition of Projected Costs of Generating Electricity is that the levelised costs of electricity generation of low-carbon generation technologies are falling and are increasingly below the costs of conventional fossil fuel generation.

Electricity generation costs from new utility-scale onshore wind and solar PV plants are expected to decline by 2024, but not rapidly enough to fall below pre Covid-19 values in most markets outside China. Although commodity and ...
