South Tower Solar Power Generation

What is a solar power tower?

A solar power tower, also known as 'central tower' power plant or 'heliostat' power plant, is a type of solar furnace using a tower to receive focused sunlight. It uses an array of flat, movable mirrors (called heliostats) to focus the sun's rays upon a collector tower (the target).

Where are solar power towers located?

The two existing power tower plants in the United States are in the California/Nevada desert: the Crescent Dunes Solar Energy Project (Figure 5) and Ivanpah Solar Power Facility (Figure 6). Crescent Dunes was designed with a capacity of 110MW and resides on 1,670 acres,including 296 acres of heliostats,each sized 115m2.

What is a solar updraft tower?

This article is about a type of power plant. For other uses, see Solar tower (disambiguation). The solar updraft tower (SUT) is a design concept for a renewable-energy power plant for generating electricity from low temperature solar heat.

What is a power tower concentrating solar power plant?

In summary,the power tower concentrating solar power plant,at the heart of which lies the heliostat,is a very promising area of renewable energy. Benefits include high optical concentration ratios and operating temperatures, corresponding to high efficiency, and an ability to easily incorporate thermal energy storage.

Can a solar updraft tower power plant generate electricity?

A solar updraft tower power plant can generate electricity from the low temperature atmospheric heat gradient between ground or surface level and structurally reachable altitude. Functional or mechanical feasibility is now less of an issue than capitalisation. [1]

Are solar power towers a promising technology?

All the issues commented above make solar power towers, among other concentrated solar power technologies, a promising technology with commercial possibilities in the mid term. Better performance and cheaper electricity compared with other options seems within reach.

OverviewDesignHistory and progressEfficiencyRelated ideas and adaptationsCapitalisationSee alsoExternal linksThe solar updraft tower (SUT) is a design concept for a renewable-energy power plant for generating electricity from low temperature solar heat. Sunshine heats the air beneath a very wide greenhouse-like roofed collector structure surrounding the central base of a very tall chimney tower. The resulting convection causes a hot air updraft in the tower by the chimney effect. This ai...
