

Do public bodies get involved in electricity storage projects in Spain?

Spanish public bodies tend to get involved in storage projects during innovation and research stages and not at the commercial level. The impact of developing electricity storage projects with a public administration or an entity subject to public procurement regulations will need to be considered.

Why are battery storage options more suitable in Spain?

As a result, shorter duration storage options like batteries are more suitable in Spain. In Spain, over 50% of excess renewable energy occurs in periods where there is continuous excess for less than 12 hours i.e. a battery that chooses to charge on this energy would be able to discharge within 12 hours.

Are energy storage technologies a solution to the decarbonisation of Spain?

In this context, the development of energy storage technologies has been presented as one of the main solutions to enable the full decarbonisation of the Spanish energy system and ensure the delivery of supply, maximizing the use of the grid and providing structure to the integration of renewable technologies.

Can pumped storage capacity be increased in Spain?

Although the energy storage industry in Spain is focusing on battery storage, there is also a possibility to increase pumped storage capacity. However, there are various challenges associated with developing these projects in Spain, including social and environmental impacts, and the timelines associated with such projects.

How much will Spain finance a hybrid battery energy storage project?

The Spanish government says it will finance five hybrid battery energy storage projects, with a cumulative installed capacity of at least 600 MW. Each project can secure up to EUR15 million (\$15.68 million) in funding. From pv magazine Spain

Does Spain have a battery industry?

Furthermore, the government has recently announced plans for two battery gigafactories as currently the country has little battery manufacturing capacity. Although the energy storage industry in Spain is focusing on battery storage, there is also a possibility to increase pumped storage capacity.

i-DE, Iberdrola's electricity distribution arm, has inaugurated the first electrical energy storage system with lithium-ion batteries for distribution networks in Spain. The project, which is the first in the country, is located in ...

Development trend of energy storage in Spain Trend of PV Energy Storage Installed Capacity. According to forecasts, Spain will generate more than half of its electricity from renewable sources this year, the first of the five European ...
