

# Specifications for safety passages for photovoltaic panels

What are the standards for photovoltaics?

There are numerous national and international bodies that set standards for photovoltaics. There are standards for nearly every stage of the PV life cycle, including materials and processes used in the production of PV panels, testing methodologies, performance standards, and design and installation guidelines.

What is the first international standard governing the safety of PV modules?

The first international standard governing minimum construction requirements for the safety of PV modules was the first edition of IEC 61730, published in 2004.

What are the safety precautions when working a PV system?

When working and operating any PV system, the safeguards described below should be heeded. The best safety method is an alert mind, a doubting nature, and a slow hand. Never work on a PV installation alone. Know the PV and associated electrical system before you start to perform work. Discuss the test goals and methods with your partner.

What are the new PV standards?

The revised standards adopt widely accepted approaches in a way that specifically addresses PV technology and manufacturing processes. The standards will also support innovation in the design and manufacture of PV modules, and provide greater design flexibility in achieving the most efficient and productive outcomes.

How do you know if a PV system is safe?

The best safety method is an alert mind, a doubting nature, and a slow hand. Never work on a PV installation alone. Know the PV and associated electrical system before you start to perform work. Discuss the test goals and methods with your partner. Observe and understand PV system electrical diagrams and connections.

What is included in a PV system Hazard Course?

Course includes description of specific hazards, their frequent causes, and ways to prevent and avoid them. PV System Characteristics and Hazards section provides the background of PV system characteristics and relevant hazards involved with PV systems. Recommended safe-guards are provided.
