

Spherical water solar power generation

What is a spherical Sun power generator?

The Spherical Sun Power Generator is a solar energy capture device designed by German Architect Andre Broessel. Called the beta.ey, he believes his invention is a solution capable of squeezing "more juice out of the sun". The actual development of the beta.ey has been conducted by Andre and Rawlemon Limited.

How does a sphere solar power generator work?

The Spherical Solar Power Generator works by using a large transparent sphere to focus diffused sunlight onto a small surface area of mini-solar panels. Because the solar panels used on the device are so small, its relative efficiency is increased. It is, in effect, an innovative form of other concentrated photovoltaic technologies (CPVs).

Could this sphere power generator be the future of solar energy?

Crystal balls have been telling fortunes in fairgrounds for many years, but this Spherical Sun Power Generator could be the future of solar energy. A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere! [see-also]

Could a spherical Sun power generator help us transition from fossil fuels?

The spherical sun power generator sounds like a fantastic idea that could potentially help in the transition from fossil fuels to complete renewable energy. However, with the lack of development and research of "beta.ey" technology, we are quite a long way from these solar spheres becoming a reality.

What is a spherical solar cell?

Large-scale spherical solar cell based on monocrystalline silicon developed using a corrugated architecture. Flat solar panels still face big limitations when it comes to making the most of the available sunlight each day.

Can a spherical solar cell produce more power?

Indoor experiments with a solar simulator lamp have already shown that it can achieve between 15 percent and 100 percent more power output compared with a flat solar cell with the same ground area, depending on the background materials reflecting sunlight into the spherical solar cell.
