

# Strong winds damaged photovoltaic panel manufacturers

Can a wind storm damage a solar racking system?

In the most extreme cases, solar panels may stay anchored down, but uplift from strong winds can tear sections of your roof off. Cases like these show that a well-built solar racking system may be more resistant to high winds than your roof itself. Another potential source of panel damage during wind storms is flying debris.

Can a solar PV system be made more resilient to severe weather events?

On-site solar photovoltaic (PV) systems can be made more resilient to severe weather events by leveraging lessons learned from field examinations of weather-damaged PV systems and from engineering guidance resources. Total array loss from Hurricane Maria. Photo from Gerald Robinson, Lawrence Berkeley National Laboratory. August 2020 Derecho event.

Does wind create high pressure on solar panels?

Wind pressures can be significant, particularly at the roof ridge. The wind suction effect can create pressure on solar panels. When determining the proper distances between solar PV panels, a balance must be struck between the greatest possible back ventilation and the lowest possible loading due to this wind pressure.

Can solar panels withstand hurricane-level winds?

For example, in some areas of southern Florida, where hurricane season predictably brings extreme winds every year, solar panels must be installed to withstand winds up to 170 miles per hour. This requires solar installers to test their panels and racking equipment to ensure they remain anchored to your roof in hurricane-level winds.

Will my solar energy system hold up during a storm?

If you live in a windy area of the country, it is especially important to know how your solar energy system will hold up during a storm. Generally, solar panels are highly resistant to damage from windy conditions. Most in the EnergySage panel database are rated to withstand significant pressure, specifically from wind (and hail!)

Do solar panels need to be stowed on a roof?

Properly installed solar panels are secured on the roof and all wires are carefully stowed to account for wind patterns. If you reside in a region prone to severe winds, Forme Solar will provide you with knowledgeable recommendations.
