

# Test State Grid WeChat Group

Do residents' WeChat groups improve community trust and community attachment?

Firstly, we found that the use of residents' WeChat groups can enhance their community trust and community attachment.

Do WeChat groups mediate pro-community behavior?

In the second mediation path, the use of residents' WeChat groups also has a significant positive mediating effect on pro-community behavior through community attachment ( $\beta = 0.203$ , 95% CI [0.151, 0.264], excluding 0), and the mediating effect value was 29.08%, suggesting that H5 was supported.

Does WeChat influence individual-member and group-aggregate activity within the community?

However, due to the constraints of WeChat, direct measurement of members' identities, values, and experiences is not feasible. Instead, the activity of members and the group communication are observable. This study assessed the influence of both individual-member and group-aggregate activity within the community.

Who is the governing jurisdiction for a WeChat dispute?

WeChat International's policies asserted that the governing jurisdiction for any disputes or claims, with the exception of those that pertained to US- and EU-based users, was the Hong Kong Special Administrative Region.

Does WeChat allow content surveillance of non-China-registered users?

While WeChat China's policy documents clearly permit a wide range of blocking and WeChat International's policies appear to permit some sort of blocking, these policies at best explain the motivation for content surveillance of non-China-registered users but do not enable it.

Do WeChat groups have a continuous stream of messages?

Our findings also pertain to the continuous stream of messages within WeChat groups: When members are engaged in one discussion and a new discussion emerges, their attention is more likely to shift fluidly to the new conversation and participate in it. This result underscores the unique characteristics of chat-based communities.
