

The current status of microgrid research in China

What is the development potential of China's micro-grid?

"The National Energy Board will build 30 micro-grids demonstration project during "the twelfth 5-year". Preliminary estimates by 2015,China's investment on microgrid will reach 3.167 billion yuan." reported in . Therefore,the development potential of China's micro-grid is huge.

How many micro-grid projects are there around the world?

According to a new tracker report from Pike Research,more than 160micro-grid projects are currently active around the world,with power generation capacity totaling more than 1.2 gigawatts (GW). However,China as the largest developing country with the fastest growing economy,micro-grid research and development is still in pilot stage.

Do microgrid technologies face new challenges in China?

After years of development in China,microgrid technologies have achieved remarkable results,but there are still a lot of smart device issues that need to be addressed throughout the entire microgrid system. At the same time,microgrid technologies faces new challengesunder the background of the new era of electricity sector development.

What is the research on DC microgrids in China?

From 2009 to 2016, research on DC microgrids in China has gradually involved many different aspects, such as the study of DC microgrid power electronic converters, DC circuit breakers, and other key equipment, as well as operation control technology, protection, and energy management. 1.2 China's Current and Planned Policies Regarding MG

Are there bottlenecks in the development of Microgrid technology in China?

Although the development of microgrid technology in China has achieved some remarkable results,there are many bottlenecksin the comprehensive application and operation and control mode of microgrids involving advanced power electronics,computer control,communications and other technologies.

What are the advantages and disadvantages of micro-grid development in China?

Development of micro-grid in China also has many advantages. On one hand, renewable resources in China are very abundant. With the progress of technology, the cost of the development and utilization of renewable resources is declining.
