

# The generator outlet air temperature is not greater than

What is the ambient temperature of a generator set?

So at 18:24, the ambient capability =  $(230 - 198.3) + 82.0 = 113.7$ °F. In this case, the generator set can continue to operate at full load with an outside air temperature of nearly 114°F. When the ambient temperature is at the maximum 114°F (generator set ambient capability), the air temperature at the radiator core would be 148°F.

Why does the ambient capacity of a generator vary?

Site conditions, including the altitude and relative humidity, will cause the ambient capability to vary. When an enclosure is fitted to a generator set with a radiator and pusher/blower fan, it will lower the ambient capability of the generator set.

What happens if an enclosure is fitted to a generator set?

When an enclosure is fitted to a generator set with a radiator and pusher/blower fan, it will lower the ambient capability of the generator set. This is due to both increased restriction of the cooling air and heating of the cooling air before it reaches the radiator core.

Should the ambient capacity of a generator be quoted at full load?

The ambient capability of a generator set should be quoted at full load, which would account for the most arduous running condition since the ambient capability would obviously improve when running at lower loads with less heat being rejected from the engine and alternator.

Do generator sets work in hot climates?

In order for generator sets to function as intended in hot climates, users must assess the ambient capability of the model prior to acquisition.

What is ambient capability in a generator?

The ambient capability, or ambient clearance of a generator set, is defined as the maximum ambient temperature in which the cooling system can operate effectively without causing the generator set to shutdown due to high engine temperature. Site conditions, including the altitude and relative humidity, will cause the ambient capability to vary.

4 &#0183; ADJUSTABLE THERMOSTAT CONTROL: Provide heat/cool 2 modes for you to choose, you can set the appropriate temperature (0-100°/32°-212°) according to your needs, the thermostat will automatically turn on or off your ...
