

The latest specification for photovoltaic panel welding column head

What are the physical properties of solar cell welding materials?

The thickness of silicon wafer is 160 mm, the thickness of PV copper strip is 0.1 mm, the thickness of Sn alloy coating is 15 mm and 25 mm respectively. The physical properties of materials used in solar cell welding are shown in Table 6.

How welding strip affect the power of photovoltaic module?

The quality of welding strip will directly affect the current collection efficiency of photovoltaic module, so it has a great impact on the power of photovoltaic module. The so-called photovoltaic welding strip is to coat binary or ternary low-melting alloy on the surface of copper strip with given specification.

What is photovoltaic welding strip?

The so-called photovoltaic welding strip is to coat binary or ternary low-melting alloy on the surface of copper strip with given specification. The methods of continuously and evenly coating low-melting metals and alloys on the metal strip include electroplating, vacuum deposition, spraying and hot-dip coating.

Does surface structure of heterogeneous welding strip affect power enhancement of photovoltaic module?

In order to study the influence of the surface structure of heterogeneous welding strip on the power enhancement of photovoltaic module, three kinds of heterogeneous welding strips are selected for theoretical simulation. Meanwhile, a conventional welding strip is selected as the comparison sample.

How to reduce the shading area of a photovoltaic welding strip?

The shading area of the photovoltaic welding strip is reduced by reducing the width of the main grid line and the PV welding strip, and the total amount of light received by the solar cell is increased. However, the contact resistance of the whole PV assembly is too large, which increases the electrical loss of the photovoltaic module.

What is a Welding Procedure Specification?

This specification provides the requirements for qualification of welding procedure specifications, welders, and welding operators for manual, semiautomatic, mechanized, and automatic welding.

The Column & Boom is ideal for welding circumferential and longitudinal joints. Column & Booms are ideal for mounting of a submerged arc welding head or MIG welding head when welding pipe/ vessel work. Larger units enable the welding ...
