

## The originator of solar power generation principle

### How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells,or photovoltaic cells. In such cells,a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

#### Who invented the solar cell?

Bell Laboratories invented the modern solar cell in 1954. Daryl Chapin, one of the original inventors of the solar cell, gifted some of his cells to Lynn Salvo after an interview in 1993. Over 67 years after their creation, these solar cells still produce power.

#### What is solar power & how does it work?

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power. Solar panels use the photovoltaic effect to convert light into an electric current.

What is the working principle of a solar cell?

Working Principle: The solar cell working principle involves converting light energy into electrical energyby separating light-induced charge carriers within a semiconductor. Role of Semiconductors: Semiconductors like silicon are crucial because their properties can be modified to create free electrons or holes that carry electric current.

When was solar energy first used?

First Practical Silicon Solar Cell: The first silicon solar cell, with an efficiency of 4%, is primarily used in space applications, including powering satellites. Energy Crisis Drives Interest: Solar energy gains attention during the oil crises, and President Jimmy Carter installs solar panels on the White House in 1979.

#### Who invented solar panels?

However, solar cells as we know them today are made with silicon, not selenium. Therefore, some consider the true invention of solar panels to be tied to Daryl Chapin, Calvin Fuller, and Gerald Pearson's creation of the silicon photovoltaic (PV) cell at Bell Labs in 1954.
