

The purpose of microgrid master-slave control

What is the nature of microgrid?

The nature of microgrid is random and intermittent compared to regular grid. Different microgrid structures with their comparative analyses are illustrated here. Different control schemes, basic control schemes like the centralized, decentralized, and distributed control, and multilevel control schemes like the hierarchical control are discussed.

What is master-slave control mode?

Master-slave control mode is a typical example of a centralized control scheme. A master-slave coordinated control mode is proposed in Reference 225 to regulate the DC bus voltage, where, ESS units are considered as the master and the remaining units like the renewable energy source and loads are considered as the slaves to regulate their power.

Which control techniques are used in microgrid management system?

This paper presents an advanced control techniques that are classified into distributed, centralized, decentralized, and hierarchical control, with discussions on microgrid management system.

What are the studies run on microgrid?

The studies run on microgrid are classified in the two topics of feasibility and economic studies and control and optimization. The applications and types of microgrid are introduced first, and next, the objective of microgrid control is explained. Microgrid control is of the coordinated control and local control categories.

What are microgrid control objectives?

The microgrid control objectives consist of: (a) independent active and reactive power control, (b) correction of voltage sag and system imbalances, and (c) fulfilling the grid's load dynamics requirements. In assuring proper operation, power systems require proper control strategies.

What is Microgrid modeling?

A microgrid modeling by applying actual environmental data, where the challenges and power quality issues in the microgrid are observed. The compensation methods vs. these concerns are proposed through different control techniques, algorithms, and devices. Proposing modern hybrid ESSs for microgrid applications.
