

# The role of the medium-pressure tray in photovoltaic support

How can energy storage help a large scale photovoltaic power plant?

Li-ion and flow batteries can also provide market oriented services. The best location of the storage should be considered and depends on the service. Energy storage can play an essential role in large scale photovoltaic power plants for complying with the current and future standards (grid codes) or for providing market oriented services.

Can a large scale photovoltaic power plant interconnect energy storage?

The way to interconnect energy storage within the large scale photovoltaic power plant is an important feature that can affect the price of the overall system. This is a field still requiring further research.

What are the energy storage requirements in photovoltaic power plants?

Energy storage requirements in photovoltaic power plants are reviewed. Li-ion and flywheel technologies are suitable for fulfilling the current grid codes. Supercapacitors will be preferred for providing future services. Li-ion and flow batteries can also provide market oriented services.

Do current power systems support the integration of PV?

Current power systems are not designed to support the massive integration of PV and to respond to the grid codes. The application of intelligent and online control methods for better coordination between all parts of modern electrical systems is very important.

Which technology should be used in a large scale photovoltaic power plant?

In addition, considering its medium cyclability requirement, the most recommended technologies would be the ones based on flow and Lithium-Ion batteries. The way to interconnect energy storage within the large scale photovoltaic power plant is an important feature that can affect the price of the overall system.

What support devices can be used in a large scale PV power plant?

In addition, there can be other supporting devices such as FACTS, capacitor banks or storage systems to provide grid support functions. As shown, large scale PV power plants have several generation units (generation unit = PV array + converter).
