

## The role of the wind chamber in a garbage power plant

Can wind turbine blade waste be used in cement production?

6. The utilization of EOL Wind turbine blade waste in cement production will enhance the mills' and cement plants' environmental assessments. As a result, coprocessing is the most practical, environmentally beneficial, and cost-effective recycling approach for dealing with current and future wastes.

How will local waste management impact the wind power sector?

Local waste management level would placeconsiderable impact on sustainability of the wind power sector in China (accounts for 2.4% of onshore and 33% of offshore in China by 2050 (IEA and ERI,2014)) and power sector in Guangdong (accounts for 35% of generating capacity in Guangdong by 2050 (GDTE and GDCSG,2020)).

Are wind turbines a waste recycling solution?

This review study provides a significant platform for academics and decision-makers working in the field of wind turbines by offering a more complete picture of the waste recycling solutions accessible. Today,a wind-energy-based system is treated as one of the clean and mature options among all existing renewable energy sources.

Is wind energy waste a problem?

Waste is a problemthat's vexed the wind energy industry and provided fodder for those who seek to discredit wind power.

How does a waste-to-energy plant work?

In terms of volume,waste-to-energy plants incinerate 80 to 90 percent of waste. Sometimes,the residue ash is clean enough to be used for some purposes such as raw materials for use in manufacturing cinder blocks or for road construction. In addition,the metals that may be burned are collected from the bottom of the furnace and sold to foundries.

How to decompose wind turbine blades?

Alcohol and water are usually preferred as a medium for decomposition (Okajima and Sako,2017). Mattsson et al. (2020) focussed on recycling of glass and hydrocarbon EOL wind turbine blades by solvolysisusing supercritical water as solvent at 250 °C-370 °C and 100-170 bar with catalyst and some additives (Mattsson et al.,2020).

A waste-to-energy plant is a waste management facility that combusts wastes to produce electricity. This type of power plant is sometimes called a trash-to-energy, municipal waste incineration, energy recovery, or resource recovery plant. Modern waste-to-energy plants are very different from the trash incinerators tha...
