

# The touching story of wind power rush to generate electricity

What is the wind power story?

Spanning the entire history of wind power (1888-2018), *The Wind Power Story: A Century of Innovation that Reshaped the Global Energy Landscape* provides balanced coverage of each decade as well as the important wind power technology innovations that occurred during that time.

How do humans use wind energy?

Humans use this wind flow, or motion energy, for many purposes: sailing, flying a kite, and even generating electricity. The terms "wind energy" and "wind power" both describe the process by which the wind is used to generate mechanical power or electricity.

What are the main themes in wind power development?

It introduces and examines broad themes such as government funding of wind power, the role of fossil fuels in wind power development, and the importance of entrepreneurs in wind power development.

How does a wind turbine turn mechanical power into electricity?

This mechanical power can be used for specific tasks (such as grinding grain or pumping water) or a generator can convert this mechanical power into electricity. A wind turbine turns wind energy into electricity using the aerodynamic force from the rotor blades, which work like an airplane wing or helicopter rotor blade.

Where did wind power come from?

Wind-powered pumps drained the polders of the Netherlands, and in arid regions such as the American midwest or the Australian outback, wind pumps provided water for livestock and steam engines. With the development of electric power, wind power found new applications in lighting buildings remote from centrally generated power.

When did wind power start?

An important moment in history for wind power was during the US energy crisis of the 1970s, which forced researchers and leaders to explore alternative energy options.<sup>7</sup> Development came primarily from the US with a research program backed by NASA, designed to find a utility scale energy resource.

Overview 19th century Antiquity Early Middle Ages Late Middle Ages 18th century 20th century 21st century The first wind turbine used for the production of electricity was built in Scotland in July 1887 by Prof James Blyth of Anderson's College, Glasgow (the precursor of the University of Strathclyde). Blyth's 10 m high, cloth-sailed wind turbine was installed in the garden of his holiday cottage at Marykirk in Kincardineshire and was used to charge accumulators developed by the Frenchman Camille Alphonse Faure

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan--wind turbines

# The touching story of wind power rush to generate electricity

use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, ...
