How does wind load affect photovoltaic panels?

The wind load on the photovoltaic panel array is sensitive to wind speed, wind direction, turbulence intensity, and the parameters of the solar photovoltaic panel structure. Many researchers have carried out experimental and numerical simulation analyses on the wind load of photovoltaic panel arrays. Table 1.

How does wind pressure affect a front-row photovoltaic panel?

Pressure distribution along the solar panel profile line. In addition to SP1 being subjected to the main wind load, the wind pressure attenuation of the rest of array a is obvious. Hence, the structure needs to focus on strengthening the structural strength of the front-row photovoltaic panels.

How to study wind load of photovoltaic panel arrays?

Many researchers have carried out experimental and numerical simulation analyses on the wind load of photovoltaic panel arrays. Table 1. Features of different offshore floating photovoltaics. The boundary-layer wind tunnels (BLWTs) are a common physical experiment method used in the study of photovoltaic wind load.

Do different roof types affect the net wind load of PV panels?

Different roof types cause different flow patterns around PV panels, thus change the flow mechanism exerted on PV panels. In this study, the effects of roof types, heights and the PV array layouts on the net wind loads of the PV panel is investigated.

Why is wind load important for a Floating photovoltaic system?

The wind load is especially important for floating photovoltaic systems. Fig. 2, a floating photovoltaic system is above the sea or a lake. A floating body supports the solar panels by the buoyancy force, which is balanced with the weights of the solar panel and itself.

Do roof-mounted PV arrays influence wind loads?

The wind loads of the PV array were influenced significantly by the PV panel tilt angle and the PV array setback from the roof leading edge. The wind flow mechanism related to the wind loads of the roof-mounted PV array was researched by Kopp et al. (2012) taking into consideration of two panel tilt angles.
