

Theoretical weight of photovoltaic C-type bracket

What are the characteristics of a cable-supported photovoltaic system?

Long span, light weight, strong load capacity, and adaptability to complex terrains. The nonlinear stiffness of the new cable-supported photovoltaic system is revealed. The failure mode of the new structure is discussed in detail. Dynamic characteristics and bearing capacity of the new structure are investigated.

What factors affect the bearing capacity of new cable-supported photovoltaic modules?

The pretension and diameter of the cables are the most important factors of the ultimate bearing capacity of the new cable-supported PV system, while the tilt angle and row spacing have little effect on the mechanical characteristics of the new type of cable-supported photovoltaic modules.

What is a fixed adjustable photovoltaic support structure?

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed adjustable photovoltaic support structure design is designed.

What is a new cable-supported photovoltaic system?

A new cable-supported photovoltaic system is proposed. Long span, light weight, strong load capacity, and adaptability to complex terrains. The nonlinear stiffness of the new cable-supported photovoltaic system is revealed. The failure mode of the new structure is discussed in detail.

What rack configurations are used in photovoltaic plants?

The most used rack configurations in photovoltaic plants are the 2 V \times 12 configuration (2 vertically modules in each row and 12 modules per row) and the 3 V \times 8 configuration (3 vertically consecutive modules in each row and 8 modules per row). Codes and standards have been used for the structural analysis of these rack configurations.

What is the JIS code for photovoltaic modules support structures?

NB/T 10115-2018; Code for Design of Photovoltaic Modules Support Structures. General Electric Power Planning and Design Institute: Beijing, China, 2018. JIS C 8955; Load Design Guide on Structures for Photovoltaic Array. Japanese Standards Association: Tokyo, Japan, 2017. Browne, M.T.L.; Taylor, Z.J.; Li, S.
