

Things to note when hanging photovoltaic panels from an aircraft

Does the FAA have a stance on solar PV around airports?

The US Federal Aviation Authority (FAA) had technical guidance, which has directly informed the CAA's stance on solar PV around airports.

Does solar PV affect glare in airports?

Despite the threat to aviation safety with solar installations in airport, only a few countries have framed regulation on glare impact. The paper attempts to study the various factors affecting the occurrence of glare from solar PV array in Airport.

Can solar photovoltaics be deployed on airports?

Indeed, more recently we have been receiving more inquiries from airfield operators who are looking to deploy solar photovoltaics (PV) on the land surrounding the runways and taxiways, as well as on airport structures, including hangars and terminal buildings.

Does solar PV glare cause dazzling to pilots?

The solar PV glare may cause dazzling to pilots. Sometimes, it may confuse the pilots with aeronautical lights. The issues of solar PV glare in airport area is reported in news and websites (Federal Aviation Administration (FAA), 2018).

Can solar energy be used in aviation?

Implementing solar energy in aviation comes with its fair share of challenges. The limited efficiency and energy density of solar panels pose significant hurdles in achieving long-range solar-powered flights. The additional weight of solar panels can also impact the overall performance and payload capacity of aircraft.

Why are airports a good location for solar PV?

Solar PV works best where the electricity can be generated and consumed within nearby proximity. This is one of the central reasons why airports are good locations for solar PV as airports are high energy consumption facilities. However, airports need to evaluate the need, the demand, supply opportunities before deciding to develop solar PV project.
