

Using solar panels at home

What are the different types of solar panels for home use?

When shopping for solar panels, it's also helpful to know the panel types that are available. The three basic solar panel categories are monocrystalline, polycrystalline and thin-film. Each type of solar panel comes with its own list of pros and cons: Monocrystalline panels are made from a single, pure crystal of silicon.

What are the benefits of solar panels for home use?

Another benefit of installing a solar panel at home is that it will increase the value of your home when you decide to sell it. Depending on the size and condition of your home, a solar panel can add as much as \$15,500 to the value of your home. In addition to the increased value of your home, solar energy is also good for the environment.

Are solar panels for home use worth it?

In general, yes, solar panels are worth it. Solar panels are usually most worth it if: You own your property: renters or business owners who do not own their property should speak to the property owner prior to making any plans to install a solar system.
